Cartography Services

Minserve

THE MINSERVE GROUP

The Minserve Group was founded in 1989 to provide expert mining advisory services to all levels of the mining sector. As the industry has evolved, Minserve has been at the forefront of this progression, working with some of the world's leading operations. This has given Minserve the tools and experience to provide industry leading solutions to any mining situation.

Minserve prides itself on the high standard of cartography, drafting and presentation material that is provided to clients. Every aspect of mine planning and operations can be represented in a uniquely tailored map to suit the subject matter, be its environmental analysis, geological exploration, or open cut mine stage plans.

Our Tools

Vulcan	Surpac	Spry
Deswik	XPAC & TALPAC	HaulSIM

GROUP CAPABILITY

Mine Design

Comprehensive mine design layouts for both opencut and underground operations, tailored to meet project-specific requirements.

Progressive Rehabilitation

We provide detailed mine stage plans that clearly illustrate progressive rehabilitation areas throughout the life of the project. We produce ERC maps that help track reclamation efforts, ensuring compliance with environmental regulations

EMP and EIS Designs and Figures

Design and production of Environmental Management Plans (EMP) and Environmental Impact Statements (EIS), delivering clear figures which enhance understanding.

Mining Tenure and Cadastral Management

Providing detailed management plans to navigate mining rights, land access, and overlapping interests. We develop maps ensuring accurate representation of lease boundaries and land ownership
