TECHNICAL STUDIES

Minserve

THE MINSERVE GROUP

The Minserve Group was founded in 1989 to provide expert mining advisory services to all levels of the mining sector. As the industry has evolved, Minserve has been at the forefront of this progression, working with some of the world's leading operations. This has given Minserve the tools and experience to provide industry leading solutions to any mining situation.

Minserve has a long history of working closely and collaboratively with our valued clients to deliver the full range of mining studies. Minserve's team of skilled and experienced engineers and project managers step through an iterative process to deliver an optimised output in a timely manner.

KEY STUDY COMPONENTS

- Options Analysis
- Mine Design and Scheduling
- Infrastructure Design
- Operations Readiness
- Risk Management
- Cost Estimation

GROUP CAPABILITY

Conceptual Studies

The early stage evaluation of a mining project's potential economic viability. It provides an order of magnitude estimation of the potential viability of a Mineral Resource.

Pre-Feasibility Studies

Review all viable options and define the scope of the project, confirming the business case through an economic evaluation

Feasibility Studies

Develop the project such that it is ready for implementation, confirming the business case
